Buscando en GitHub...

The image shows a screenshot of a GitHub search results page. The results are for three items: 'wp-calypso', 'themes', and 'amp-wp'. The 'wp-calypso' and 'amp-wp' titles are circled in blue. The 'themes' item is also visible. The right sidebar shows 'Top languages' (PHP, JavaScript, CSS, Java, Shell) and 'Most used topics' (wordpress, vip-go, vip, wordpress-plugin, php). The 'People' section shows a grid of 15 user avatars and a count of 136.

Add admin notice if persistent object caching is not present #960

New issue

Open westonruter opened this issue on 14 Feb · 0 comments

 westonruter commented on 14 Feb

Collaborator +

The plugin really performs best (as does WordPress generally) when a persistent object cache is present. We detect whether it is present and inform if it is missing.

Hi @westonruter,

Could you use this PR which addresses [#960](#) ?

I was not sure where it was best to write the method in, so I opted to write it in **class-amp-validation-utils** but i'm open to your suggestions.

I'm also not sure if the output message would be good as it is now. I opted to include a link to https://codex.wordpress.org/Class_Reference/WP_Object_Cache#Persistent_Caching since users might not know what persistent object cache is and how to enable it.

AMP Settings

The AMP plugin performs at its best when persistent object cache is enabled.

I think we should eliminate the dismissal because as soon as the page reload the notice comes right back.
